A. Floor sound-absorbing room partition

A.1. Technical Data

A.1.1. The base of the divider is made of 35 mm plywood varnished with clear varnish. It has four wheels, two of which have brakes.

A.1.2. On the base are placed five specially shaped and coated rotating elements, each 220mm wide and 1900mm high. Each element consists of a specially formed steel plate 0.9mm thick, which is covered with a special sound-absorbing material 5mm thick and a sound-absorbing fabric of the customer's choice.
